## A TO Z WORKS :

- ✓ H.V.A.C. : We design new and re-design existing mechanical H V A C systems. Our experience includes high performance energy efficient design, extensive modernization retrofits and specialist applications.
- ✓ Air-conditioning Systems : Central Plants, VRV, Splits, Packaged units
- ✓ Heating Systems, Clean room and Hospital Air-conditioning
- ✓ Precision Air-conditioning for Data Centers and Server Rooms.
- ✓ Industrial Ventilation
- ✓ SYSTEM Kitchen Ventilation
- ✓ SYSTEM Ducting & Piping
- ✓ Layouts
- ✓ VAV-based Air Distribution System and Control Ventilation.

## A TO Z WORKS :

✓ Ventilation is mainly used to control indoor air quality by diluting and displacing indoor pollutants; it can also be used to control indoor temperature, humidity, and air motion to benefit thermal comfort, satisfaction with other aspects of indoor environment, or other objectives.

## A TO Z WORKS :

✓ Electricity is all around us—powering technology like our cell phones, computers, lights, soldering irons, and air conditioners. It's tough to escape it in our modern world. Even when you try to escape electricity, it's still at work throughout nature, from the lightning in a thunderstorm to the synapses inside our body. But what exactly is electricity? This is a very complicated question, and as you dig deeper and ask more questions, there really is not a definitive answer, only abstract representations of how electricity interacts with our surroundings

## A TO Z WORKS :

- ✓ Plumbing is any system that conveys fluids for a wide range of applications. Plumbing uses pipes, valves, plumbing fixtures, tanks, and other apparatuses to convey fluids.
- ✓ Heating and cooling (HVAC), waste removal, and potable water delivery are among the most common uses for plumbing, but it is not limited to these applications. The word derives from the Latin for lead, plumbing, as the first effective pipes used in the Roman era were lead pipes.

## A TO Z WORKS :

- ✓ Fire Fighting is the act of attempting to prevent the spread of and extinguish significant unwanted fires in buildings, plant & machinery, vehicles.
- ✓ One of the major hazards associated with firefighting operations is the toxic environment created by combustible materials. The four major risks are smoke, oxygen deficiency, elevated temperatures, and poisonous atmospheres.

## A TO Z WORKS :

- ✓ The purpose of the air conditioner grill is to diffuse the air from the ductwork. It directs the flow of air out of ducts or into the return air vent. Grills tend to be adjustable, so airflow in specific rooms can be restricted or even shut off entirely.

- ✓ An air conditioning system has two coils, condenser coils and evaporator coils usually made of copper tubes with aluminum fins. The condenser coil or outdoor coil is the “warm” coil as it rejects the heat as a fan blows outside air over the surface.

## A TO Z WORKS :

- ✓ Fabrication is the creation of metal structures by cutting, bending and assembling processes. It is a value-added process involving the creation of machines, parts, and structures from various raw materials.
- ✓ Typically, a fabrication shop bids on a job, usually based on engineering drawings, and if awarded the contract, builds the product. Large fab shops employ a multitude of value-added processes, including welding, cutting, forming and machining.
- ✓ Metal fabrication usually starts with drawings with precise dimensions and specifications. Fabrication shops are employed by contractors, OEMs and VARs. Typical projects include loose parts, structural frames for buildings and heavy equipment, and stairs and hand railings.
